WEATHER BUREAU

General Summary of Weather Conditions

May temperatures were below normal in British Columbia and Alberta, and above normal elsewhere, with particularly mild temperatures in Quebec and the Maritime Provinces. It was a cloudy, wet month in British Columbia, in the Peace River country, in western Manitoba and in southern Ontario. In the Maritimes and Quebec, May was relatively dry.

The weather of the month was mainly determined by the marked change from a high index to a low index state that occurred near the end of April and continued through most of May. This index situation was associated with two strong waves of blocking action at high latitudes which retrogressed across the north Atlantic Ocean to Baffin Island. With the main westerly current of air crossing the west coast of North America just south of British Columbia, which is further south than was the case in April, British Columbia and Alberta had mean temperatures below normal. Strong cyclonic circulation over the Great Lakes, a result of the blocking pattern in northern Labrador, was responsible in turn for the general wetness in the Great Lakes area and the above-normal temperatures in Eastern Canada.

May was a cool, cloudy, wet month in British Columbia. It was one of the cloudiest Mays on record, and one of the wettest, with many stations reporting record high amounts of rainfall and record low amounts of sunshine. Precipitation amounts ranged from about twenty per cent above normal along the north coast to twice normal or more along the south coast and in sections of the interior. Partly as a result of the cloudy skies, minimum temperatures were for the most part normal or a little above, but afternoon temperatures were notably low. As a result, mean temperatures averaged two to five degrees below the normal May values.

May temperatures were rather below normal in Alberta and western Saskatchewan, but above normal east of Regina. The first week was rather cool, but the second was remarkably warm. On the 12th, Moose Jaw reported a temperature of 99°F. and Regina 97°F.

Precipitation in most areas of the Prairie Provinces was near normal, but with several notable exceptions. There were small deficiencies generally south of the Battle and Saskatchewan Rivers and small excesses in southeastern Saskatchewan. There were somewhat larger excesses along the Saskatchewan River between Prince Albert and The Pas, with stations near the Saskatchewan Forks reporting falls more than twice the May normal.

Both total precipitation and total snowfall records were set in the Peace River area, on the Alberta-British Columbia boundary. On May 21st and 22nd a heavy snowstorm deposited amounts up to eighteen inches. As a result, snowfall amounts in the Dawson Creek-Fort St. John area greatly exceeded any previously on record for May.

There was an area of excessive rainfall also in southwestern Manitoba, where a rainstorm on the 25th gave twenty-four hour amounts of 3.37 inches to Brandon and 2.96 inches to Rivers. Many stations in the area reported monthly totals twice the May normal.

In northwestern Ontario, it was fairly close to a normal May. Temperatures, a little cool early in the month, rose later to give mean temperatures a little above normal. Precipitation amounts were on the whole near the normal, with small excesses at Fort William-Port Arthur and Ignace balancing small deficiencies elsewhere.

In the southeastern part of northern Ontario, and in most of southern Ontario, May was a wet, mild month. Much of the precipitation fell during the second week, as a low pressure area stagnated over the Great Lakes. Mean temperatures were for the most part above normal. The excesses were due, however, to the cloudy mild nights rather than to warm days.

Many stations in northeastern Ontario reported more than six inches of rainfall during the month. This fall, added to the melting snows, produced serious flooding conditions. As dams failed and roads and bridges were washed out, Timmins and Foleyet were virtually isolated. In southern Ontario, despite the higher than normal temperatures, frequency of rain and the lack of drying days left the ground wet and seriously delayed farm work. At the end of the month little work had been done on the land, and many agriculturists were calling it one of the most retarded spring seasons on record.

A few stations between London and Windsor reported rainfall amounts below normal, but even at these stations the month was cloudy, and the frequency of dull wet days was nevertheless high.

The Province of Quebec experienced much warmer, and in most areas, drier weather than normal. Most sections had mean daily maximum, mean daily minimum, and monthly mean temperatures from five to seven degrees above normal. At Montreal, where city observations have been taken since 1875, a mean temperature of 63°F. was recorded, making May 1960 the warmest over the whole period of record. The last week was particularly warm; on the 28th, Quebec Airport reported a maximum of 91°F. - the highest May temperature since the station opened in 1942.

Precipitation in Quebec exceeded normal at few stations in the Eastern Townships, and in an area near Lake Temiskaming. Elsewhere, falls were about one-third to two-thirds normal. Severe forest fires were reported late in the month to the north of Seven Islands.

May was a warm, dry month in the Maritimes. With the very sluggish eastward progression of weather systems, the cold dry air moving from the north warmed rapidly. Precipitation falls were, therefore, below normal, and so were humidities. As a result, forest-fire hazards were high. In southwestern Nova Scotia and southwestern New Brunswick, a few stations reported local precipitation excesses, mainly a result of shower activity. Temperatures were everywhere above normal. Some stations reported the warmest May on record, and there were individual reports of temperatures into the nineties.

Newfoundland - both Labrador and the Island - lay in the same regime as the Maritimes, with above normal temperatures and, for the most part, below normal precipitation.

In the Northwest Territories May was for most part rather warm and dry. Alert and Isachsen with mean temperatures of 15° were the coldest locations in the nation during the month. Minimum temperatures of 12° below zero at these two locations were also extremes for Canada as a whole. On the other hand, some exceedingly high temperatures were reported from the Yukon Territory where Dawson had a maximum of 86°. Most of the Arctic was from two to six degrees above normal over the month, while the upper Mackenzie basin averaged near normal. Exceptionally light precipitation was reported throughout the north, in fact, most areas were well below normal. By the end of the month, the only snow cover left in Canada was north and east of a line from Port Radium to Churchill to Fort Chimo. The maximum depth was at Clyde where on the 31st twenty-six inches were reported on the ground.

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
